EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 413
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer built an application by using multiple AWS Lambda functions. The Lambda functions must access dynamic configuration data at runtime. The data is maintained as a 6 KB JSON document in AWS AppConfig. The configuration data needs to be updated without requiring the redeployment of the application.

The developer needs a solution that will give the Lambda functions access to the dynamic configuration data.

What should the developer do to meet these requirements with the LEAST development effort?

A. Migrate the document from AWS AppConfig to a Lambda environment variable. Read the document at the runtime.

B. Configure the AWS AppConfig Agent Lambda extension. Access the dynamic configuration data by calling the extension on a local host.

C. Use the AWS X-Ray SDK to call the AWS AppConfig APIs. Retrieve the configuration file at runtime.

D. Migrate the configuration file to a Lambda deployment package. Read the file from the file system at runtime.

Selected Answer: B

The AWS AppConfig Agent Lambda extension is specifically designed to provide easy access to AppConfig configurations from Lambda functions. It allows for dynamic updates without redeployment and requires minimal development effort.

Selected Answer: B

Environment variables have a size limit of 4 KB, which is insufficient for a 6 KB document.
