EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 415
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A company has an application that uses an AWS Lambda function to consume messages from an Amazon Simple Queue Service (Amazon SQS) queue. The SQS queue is configured with a dead-letter queue. Due to a defect in the application, AWS Lambda failed to process some messages. A developer fixed the bug and wants to process the failed messages again.

How should the developer resolve this issue?

A. Use the SendMessageBatch API to send messages from the dead-letter queue to the original SQS queue.

B. Use the ChangeMessageVisibility API to configure messages in the dead-letter queue to be visible in the original SQS queue.

C. Use the StartMessageMoveTask API to move messages from the dead-letter queue to the original SQS queue.

D. Use the PurgeQueue API to remove messages from the dead-letter queue and return the messages to the original SQS queue.

C
StartMessageMoveTask: This API is specifically designed for moving messages between SQS queues, including moving messages from a dead-letter queue (DLQ) back to the original queue. This method is efficient and preserves message attributes and other metadata.
