EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 460
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is implementing a serverless application by using AWS CloudFormation to provision Amazon S3 web hosting. Amazon API Gateway, and AWS Lambda functions. The Lambda function source code is zipped and uploaded to an S3 bucket. The S3 object key of the zipped source code is specified in the Lambda resource in the CloudFormation template.

The developer notices that there are no changes in the Lambda function every time the CloudFormation stack is updated.

How can the developer resolve this issue?

A. Create a new Lambda function alias before updating the CloudFormation stack.

B. Change the S3 object key or the S3 version in the CloudFormation template before updating the CloudFormation stack.

C. Upload the zipped source code to another S3 bucket before updating the CioudFormation stack.

D. Associate a cade signing configuration with the Lambda function before updating the CloudFormation stack.

Selected Answer: B

You have to change the S3 Object Key and the Version every time you update the code,

Selected Answer: A

A. Lambda alias pointing to $LATEST will resolve this issue.

B could also fit in this situation, but if deployment can happen even couple times a day it is very annoiyng to change manually the version of the lambda funtion everytime in cloudformation template
