Exam question from Amazon's AWS Certified Developer - Associate DVA-C02

Question #: 483

Topic #: 1

[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is updating an Amazon API Gateway REST API to have a mock endpoint. The developer wants to update the integration request mapping template so the endpoint will respond to mock integration requests with specific HTTP status codes based on various conditions.

Which statement will meet these requirements?

A.
```
{
    #if{ $input.params('integration') == "mock" }
        "statusCode": 404
    #else
        "statusCode": 500
    #end
}
```

B.
```
{
    #if{ $input.params('scope') == "internal" }
        "statusCode": 200
    #else
        "statusCode": 500
    #end
}
```

C.
```
{
    #if( $input.path("integration") )
        "statusCode": 200
    #else
        "statusCode": 404
    #end
}
```

D.
```
{
    #if( $context.integration.status)
        "statusCode": 200
    #else
        "statusCode": 500
    #end
}
```

Selected Answer: C

Creo que está bien formada y utiliza #if/#else de Velocity para decidir qué código HTTP queremos devolver en función de si existe o no el campo integration en el path.
Es la forma típica de "maquetar" un mock response en API Gateway, retornando distintos statusCode según la condición.
