EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 519
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer is writing a mobile application that allows users to view images from an S3 bucket. The users must be able to log in with their Amazon login, as well as supported social media accounts.

How can the developer provide this authentication functionality?

A. Use Amazon Cognito with web identity federation.

B. Use Amazon Cognito with SAML-based identity federation.

C. Use IAM access keys and secret keys in the application code to allow Get* on the S3 bucket.

D. Use AWS STS AssumeRole in the application code and assume a role with Get* permissions on the S3 bucket.

Selected Answer: A

A - Cognito Web Identity Federation supports Amazon/social logins, granting temporary credentials for S3.
B - SAML is for corporate/enterprise identities, not social media or Amazon logins.
C - Embedding long-term credentials/keys in code is a security risk and not best practice.
D - AssumeRole alone doesn't handle user identity or social logins; it lacks federation.

Selected Answer: A

Cognito User Pool
• Create a serverless database of user for your web & mobile apps
• Simple login: Username (or email) / password combination
• Password reset
• Email & Phone Number Verification
• Multi-factor authentication (MFA)
• Federated Identities: users from Facebook, Google, SAML...
• Feature: block users if their credentials are compromised elsewhere
• Login sends back a JSON Web Token (JWT)
