EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 530
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A developer has an application container, an AWS Lambda function, and an Amazon Simple Queue Service (Amazon SQS) queue. The Lambda function uses the SQS queue as an event source. The Lambda function makes a call to a third-party machine learning API when the function is invoked. The response from the third-party API can take up to 60 seconds to return.

The Lambda function's timeout value is currently 65 seconds. The developer has noticed that the Lambda function sometimes processes duplicate messages from the SQS queue.

What should the developer do to ensure that the Lambda function does not process duplicate messages?

A. Configure the Lambda function with a larger amount of memory.

B. Configure an increase in the Lambda function’s timeout value.

C. Configure the SQS queue’s delivery delay value to be greater than the maximum time it takes to call the third-party API.

D. Configure the SQS queue’s visibility timeout value to be greater than the maximum time it takes to call the third-party API.

Selected Answer: D

The correct answer is:

D. Configure the SQS queue's visibility timeout value to be greater than the maximum time it takes to call the third-party API.
Explanation:

When a Lambda function reads a message from an SQS queue, the message becomes invisible for the duration of the visibility timeout. If the Lambda function doesn't finish processing (or doesn't delete the message from the queue) before the visibility timeout expires, the message becomes visible again and may be reprocessed, causing duplicates.

Since the third-party API can take up to 60 seconds, the visibility timeout should be set to greater than 60 seconds to ensure that the message remains hidden from other consumers until the Lambda function finishes processing it.

Selected Answer: D

el tiempo de visibilidad del mensaje en la cola SQS es demasiado corto
