EXAM AWS CERTIFIED DEVELOPER - ASSOCIATE DVA-C02 TOPIC 1 QUESTIO...

Exam question from Amazon's AWS Certified Developer - Associate DVA-C02
Question #: 539
Topic #: 1
[All AWS Certified Developer - Associate DVA-C02 Questions]

A company uses two AWS accounts: production and development. The company stores data in an Amazon S3 bucket that is in the production account. The data is encrypted with an AWS Key Management Service (AWS KMS) customer managed key. The company plans to copy the data to another S3 bucket that is in the development account.

A developer needs to use a KMS key to encrypt the data in the S3 bucket that is in the development account. The KMS key in the development account must be accessible from the production account,

Which solution will meet these requirements?

A. Replicate the customer managed KMS key from the production account to the development account. Specify the production account in the key policy.

B. Create a new customer managed KMS key in the development account. Specify the production account in the key policy.

C. Create a new AWS managed KMS key for Amazon S3 in the development account. Specify the production account in the key policy.

D. Replicate the default AWS managed KMS key for Amazon S3 from the production account to the development account. Specify the production account in the key policy.

Selected Answer: B

AWS managed keys (aws/s3) cannot be modified — you cannot add cross-account permissions to their key policies.

Selected Answer: B

C：AWS 管理キー（AWS マネージドキー）はキーの管理やポリシー変更ができず、かつアカウント間で共有できないため、要件を満たせません。
よって、Bが正解となる

Selected Answer: C

C or B
I would say C. We don't know exactly which type of KMS key will be used in development account.. KMS cusutomer key or KMS AWS menaged key? I guess the second one so it could be just default aws/s3 key.
The other thing is that production account should have access tho this new key but development account should not have access to AWS customer key in production account. Is is quite logical.
Sharing acceess to key with other accaount is to specify the account in KMS key policy.
