EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 1 DISC...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 1
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company makes forecasts each quarter to decide how to optimize operations to meet expected demand. The company uses ML models to make these forecasts.
An AI practitioner is writing a report about the trained ML models to provide transparency and explainability to company stakeholders.
What should the AI practitioner include in the report to meet the transparency and explainability requirements?

A. Code for model training

B. Partial dependence plots (PDPs)

C. Sample data for training

D. Model convergence tables

Selected Answer: B

B. Partial Dependence Plots (PDPs)

Explanation:
Partial Dependence Plots (PDPs) are useful tools for understanding the relationship between specific features and the model's predictions, making it easier to see how changes in input variables affect the forecast. PDPs are particularly helpful for stakeholders because they visually show the impact of individual features on predictions without requiring a deep understanding of the model's inner workings.

Selected Answer: B

They want the PR actioner to explain a business stakeholder, so it needs transparency and explainability. So PDPs are the correct one

PDP (Partial Dependence Plot) – Visual explanation, stakeholder understanding
Training code – Technical audience, shows implementation details
Sample training data – Check data quality / debugging, not for explainability
Model convergence tables – For ML engineers, show training optimization progress

Selected Answer: B

Explicação:Gráficos de dependência parcial (Partial Dependence Plots - PDPs) são usados para mostrar como uma variável de entrada afeta a previsão do modelo, mantendo as outras variáveis constantes.São ferramentas poderosas de explicabilidade e transparência, especialmente para partes interessadas não técnicas. Eles ajudam a visualizar a relação entre características importantes e as previsões do modelo, respondendo perguntas como:
"Se aumentarmos o orçamento em marketing, o que acontece com a demanda prevista?"

Selected Answer: B

PDPs help in explaining the relationship between the features and the model’s predictions, offering transparency into how the model makes decisions, which is critical for explainability to stakeholders. PDPs show how changes in a feature impact the model's output, thus helping to provide an understanding of the model's behavior.

Selected Answer: B

AWS certification exams are introducing new question types, including ordering, matching, and case study questions, alongside traditional multiple choice and multiple response formats. The ordering type requires arranging selected responses in the correct sequence, while matching questions involve linking statements to prompts. Case studies recycle a scenario across multiple questions, allowing candidates to save time by understanding the context once. Each question is evaluated independently, meaning it's crucial to answer all parts correctly to receive credit.
