EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 26 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 26
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A security company is using Amazon Bedrock to run foundation models (FMs). The company wants to ensure that only authorized users invoke the models. The company needs to identify any unauthorized access attempts to set appropriate AWS Identity and Access Management (IAM) policies and roles for future iterations of the FMs.
Which AWS service should the company use to identify unauthorized users that are trying to access Amazon Bedrock?

A. AWS Audit Manager

B. AWS CloudTrail

C. Amazon Fraud Detector

D. AWS Trusted Advisor

Selected Answer: B

AWS CloudTrail: CloudTrail records all API requests made to AWS services, including Amazon Bedrock. By using CloudTrail, the security company can track and log all access attempts, including any unauthorized attempts, to access Amazon Bedrock. This helps the company identify and respond to unauthorized access, and also provides detailed logs for setting up appropriate IAM policies and roles.

Selected Answer: B

B. AWS CloudTrail

CloudTrail records API activity and user actions in your AWS account. It logs events such as unauthorized access attempts to Amazon Bedrock and other AWS services, making it the correct choice for identifying such attempts.

Selected Answer: B

B: AWS CloudTrail

Explanation:
AWS CloudTrail is a service that records all API calls and user activity across AWS services, including Amazon Bedrock. By analyzing CloudTrail logs, the company can identify unauthorized access attempts, track user activity, and audit the usage of foundation models. This information helps in setting appropriate AWS Identity and Access Management (IAM) policies and roles for future iterations of the models.

Selected Answer: B

B. AWS CloudTrail is the most suitable service for identifying unauthorized access attempts to Amazon Bedrock, as it provides

detailed logging and monitoring of API calls across AWS services, helping to enforce security and compliance.
