## EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 29 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 29

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

---

A company wants to use a large language model (LLM) to develop a conversational agent. The company needs to prevent the LLM from being manipulated with common prompt engineering techniques to perform undesirable actions or expose sensitive information.

Which action will reduce these risks?

A. Create a prompt template that teaches the LLM to detect attack patterns.

B. Increase the temperature parameter on invocation requests to the LLM.

C. Avoid using LLMs that are not listed in Amazon SageMaker.

D. Decrease the number of input tokens on invocations of the LLM.

Selected Answer: A

Create a prompt template that teaches the LLM to detect attack patterns: By creating a prompt template that is specifically designed to identify and mitigate common attack patterns (e.g., prompt injections or malicious requests), you can make the LLM more robust to manipulation. This can help the LLM recognize when it's being manipulated into performing undesirable actions or exposing sensitive data, and take preventive measures accordingly.

Selected Answer: U

Explicação: A criação de cuidadosamente projetados,ados com técnicas de segurança como validação de entrada,agem de conteúdo e detecção padrões de engenharia de prompt (prompt injection), é prática fundamental para reduzir os riscos de manipulação de LLM. Essa abordagem ensina modelo a reconhecer e resistir tentativas maliciosas, como comandos disfarçados exploração de brechas prompt.

Selected Answer: A

Creating a prompt template that teaches the LLM to identify and resist common prompt engineering attacks, such as prompt injection or adversarial queries, helps prevent manipulation.
By explicitly guiding the LLM to ignore requests that deviate from its intended purpose (e.g., "You are a helpful assistant. Do not perform any tasks outside your defined scope."), you can mitigate risks like exposing sensitive information or executing undesirable actions.

Selected Answer: A

A. Create a prompt template that teaches the LLM to detect attack patterns is the best action to reduce the risks associated with prompt manipulation and to enhance the security and integrity of the conversational agent being developed.
