EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 41 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 41

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is training a foundation model (FM). The company wants to increase the accuracy of the model up to a specific acceptance level.

Which solution will meet these requirements?

A. Decrease the batch size.

B. Increase the epochs.

C. Decrease the epochs.

D. Increase the temperature parameter.

Selected Answer: B

B. Increase the epochs: In deep learning, training a model for more epochs means that the model will go through the dataset more times,

which generally leads to better learning and improved accuracy. Increasing the number of epochs allows the model to learn patterns more effectively, helping it reach the desired accuracy level. However, there's a trade-off, as increasing epochs too much could lead to overfitting.

Selected Answer: B

Explicação: Durante o treinamento de um modelo de fundação (FM), aumentar o número de épocas significa que o modelo passará mais vezes pelos dados de treinamento,
o que pode ajudar a melhorar a precisão, especialmente se ele ainda estiver aprendendo padrões importantes. Mais épocas,mais aprendizado, até certo ponto. Porém, é importante monitorar para evitar overfitting . A. Diminua o tamanho do lote: Isso pode afetar a estabilidade do treinamento, mas não garante aumento de precisão. C. Diminua as épocas: Isso reduz o tempo de aprendizado, o que pode diminuir a precisão. D. Aumente o parâmetro de temperatura: Isso afeta o comportamento do modelo na inferência, tornando as respostas mais criativas/aleatórias, mas não melhora a precisão no treinamento.

Selected Answer: B

B: Increase the epochs.

Explanation:
Increasing the epochs allows the model to go through the entire training dataset multiple times, improving its learning and optimizing its weights. This can help the model achieve a higher accuracy level, provided it does not lead to overfitting. For a foundation model (FM), increasing epochs is a common approach to refining accuracy to meet specific acceptance levels.

Selected Answer: B

B. Increase the epochs.

Increasing the number of epochs, or training cycles, can help improve the accuracy of a foundation model. By exposing the model to the training data multiple times, it can learn more intricate patterns and relationships, leading to better performance.

Selected Answer: B

B. Increase the epochs: Increasing the number of epochs allows the model to continue learning from the data, potentially improving its accuracy as it trains on more examples. However, there is a risk of overfitting if epochs are increased too much.
