EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 91 DIS...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 91

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

An ML research team develops custom ML models. The model artifacts are shared with other teams for integration into products and services. The ML team retains the model training code and data. The ML team wants to build a mechanism that the ML team can use to audit models.

Which solution should the ML team use when publishing the custom ML models?

A. Create documents with the relevant information. Store the documents in Amazon S3.

B. Use AWS AI Service Cards for transparency and understanding models.

C. Create Amazon SageMaker Model Cards with intended uses and training and inference details.

D. Create model training scripts. Commit the model training scripts to a Git repository.

C.

Create Amazon SageMaker Model Cards with intended uses and training and inference details.

Selected Answer: C

Amazon SageMaker Model Cards are designed to provide transparency and detailed information about a model's intended uses, training process, data, and performance. They are specifically designed for auditing models and making them more interpretable, which is exactly what the ML team needs. Model cards help document key details about the model, including how it was trained, its intended use cases, and any potential risks associated with its use. This solution supports effective auditing and provides a comprehensive, structured format for tracking important model information.

Selected Answer: C

Amazon SageMaker Model Cards: These provide a standardized way to document important information about ML models, including:
Model purpose and intended use cases
Training data and methodology
Evaluation metrics and results
Ethical considerations and limitations
Bias analysis
Version history This comprehensive documentation facilitates auditing by providing a clear record of how the model was developed, evaluated, and intended to be used. It also promotes transparency and accountability.
B. Use AWS AI Service Cards for transparency and understanding models:
AWS AI Service Cards are designed for pre-built AI services provided by AWS, not for custom ML models developed by a team. They are not applicable for this use case.

Selected Answer: C

The correct answer is:

C. Create Amazon SageMaker Model Cards with intended uses and

training and inference details.

Explanation:
Amazon SageMaker Model Cards provide a standardized and centralized way to document key details about a machine learning model. This includes intended use, training and inference details, performance metrics, and ethical considerations. These cards enable the ML team to maintain transparency, track audit details, and share relevant information with other teams when publishing models.
