Selected Answer: C

Computer vision is a type of AI application that enables machines to interpret and analyze visual data from the real world, such as images and videos. In this scenario, the company is using AI to inspect products for damages or defects, which involves analyzing visual inputs—making computer vision the appropriate answer.

Selected Answer: C

C. Computer vision

Explanation:

Computer vision is a field of AI that enables machines to interpret and make decisions based on visual data, such as images or videos. In the context of inspecting products for damages or defects, computer vision algorithms can analyze product images to detect visual patterns, anomalies, or defects, making it the most appropriate AI application type for this use case.
