EXAM AWS CERTIFIED AI PRACTITIONER AIF-C01 TOPIC 1 QUESTION 132 DI...

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01

Question #: 132

Topic #: 1

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is building a mobile app for users who have a visual impairment. The app must be able to hear what users say and provide voice responses.

Which solution will meet these requirements?

A. Use a deep learning neural network to perform speech recognition.

B. Build ML models to search for patterns in numeric data.

C. Use generative AI summarization to generate human-like text.

D. Build custom models for image classification and recognition.

Selected Answer: A

A. Use a deep learning neural network to perform speech recognition.

This type of solution is similar to voice assistants like Amazon Alexa or Apple's Siri, which use deep learning for:

Converting speech to text (speech recognition)
Processing the request
Converting response text back to speech (text-to-speech)

upvoted 2 times

Jessiii 1 year, 1 month ago

Selected Answer: A

Deep learning neural networks are commonly used for speech recognition tasks, converting spoken language into text, which can then be processed to provide appropriate voice responses.

ajey255 1 year, 1 month ago

Selected Answer: A

A. Other options don't meet the requirement of speech recognition and voice response

upvoted 1 times

chris_spencer 1 year, 1 month ago

Selected Answer: A

A. Use a deep learning neural network to perform speech recognition.

While C sounds feasible, it does not handle the input of the speeches
